Global Grid Systems

Message from the Guest Editors

Advances in data capturing technologies are causing an explosion in the quantity of geospatial data that is collected every day, all of which must be integrated together into a common reference model for meaningful analyses to be performed. To foster a stronger understanding of the Earth, geospatial data may be assigned and retrieved using a 3D model of the Earth, rather than a 2D map. The use of discrete global grid systems (DGGs) is an emerging approach to the creation of such 3D models. DGGs are a discretization of the Earth into hierarchical sets of highly regular cells, each of which represents a distinct region of the Earth to which data may be assigned. In this model, each cell has a unique index that is used to reference geospatial information related to that cell. In order to support multiple spatial resolutions, cells are hierarchically subdivided using simple refinements. The open geospatial consortium (OGC) has developed an abstract specification of DGGs, for use by the geospatial community Prof. Dr. Faramarz Samavati

About the Journal

Message from the Editor-in-Chief

The *ISPRS International Journal of Geo-Information* invites you to submit research articles, reviews, and reports covering topics of the whole domain of geo-information. Although the journal was only founded in 2012, it has already achieved wide recognition in the scientific community. We are proud that since April 2015, our journal is indexed by the SCIE of the Web of Science. As Editor-in-Chief, I encourage you to consider *IJGI* for your scientific papers and would be pleased to welcome you as authors.

Editor-in-Chief

Prof. Dr. Wolfgang Kainz
Cartography and Geographic Information Science, Department of
Geography and Regional Research, University of Vienna,
Universitätsstr. 7, A-1010 Vienna, Austria

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, PubAg, dblp, Astrophysics Data System, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Geography, Physical) / CiteScore - Q1 (Earth and Planetary Sciences (miscellaneous))
