Cartographic Communication of Big Data

Message from the Guest Editor

Spatial data have become ubiquitous and available in volumes so large that the digital copy of all tangible and a significant portion of untangible reality does not anymore sound like a joke. Big data are about everything—from the changing climate to COVID-19, mutability, reliability and precision of data vary from scientific data on Paleozoic strata to opinions of users about the beauty of a place automatically collected from a social network. Modern GIS technologies and mathematical methods are available for confirmator and exploratory analysis of spatial big data. Those who make the most important decisions in this world, usually do not analyze the data, they look at maps. The time has come to think what portion of the potential value of existing big data is really absorbed by decision-makers and how much we lose due to insufficient or misleading communication. This Special Issue focuses on the efficiency of cartographic communication of big data—methodological and technological, theoretical and practical aspects of modern cartographic visualizations.

About the Journal

Message from the Editor-in-Chief

The *ISPRS International Journal of Geo-Information* invites you to submit research articles, reviews, and reports covering topics of the whole domain of geo-information. Although the journal was only founded in 2012, it has already achieved wide recognition in the scientific community. We are proud that since April 2015, our journal is indexed by the SCIE of the Web of Science. As Editor-in-Chief, I encourage you to consider *IJGI* for your scientific papers and would be pleased to welcome you as authors.

Editor-in-Chief

Prof. Dr. Wolfgang Kainz
Cartography and Geographic Information Science, Department of
Geography and Regional Research, University of Vienna,
Universitätsstr. 7, A-1010 Vienna, Austria

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, PubAg, dblp, Astrophysics Data System, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Geography, Physical) / CiteScore - Q1 (Earth and Planetary Sciences (miscellaneous))
