Prof. Susan E. Ozanne

University of Cambridge Metabolic Research Laboratories and MRC Metabolic Diseases Unit, Wellcome Trust-MRC Institute of Metabolic Science, Level 4, Box 289, Addenbrookes Treatment Centre, Addenbrooke's Hospital, Cambridge CB2 0QQ, UK

Deadline for manuscript submissions:

closed (30 June 2023)

Message from the Guest Editors

Dear Colleagues,

According to IDF, 15.8% of live births are affected by gestational diabetes (GDM). The risk for both offspring and mother to develop type 2 diabetes later in life is increased 7–8-fold. The number and function of the pancreatic beta cells during pregnancy play a central role in the development of diabetes in both mother and offspring. Normally, the beta cell number will increase in the pregnant woman due to hormonal and metabolic changes concomitantly with the fetal development of the pancreas. In GDM, hyperglycemia may result in premature maturation of the fetal beta cells and growth of the child. Malnourishment during pregnancy may result in impaired development of the beta cells in the fetus by fetal programming that may be transmitted to the next generation. Recent studies of gene expression and epigenetic changes during embryonic development of the pancreas have identified a number of non-coding RNAs and histone modifications related to GDM. The purpose of this Special Issue is to gather the current knowledge in this research area in order to depict novel approaches to prevent or treat GDM and hopefully break the diabetes pandemic.

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
