Message from the Guest Editors

Dear Colleagues,

Glucagon-like peptide-1 (GLP-1) is an incretin hormone which regulates glucose homeostasis and is mainly produced by intestinal epithelial endocrine L cells. The use of GLP-1 analogous, GLP-1 receptor (GLP-1R) agonists, as well as dipeptidyl peptidase-IV (DPP-IV) inhibitors, is well established in the treatment of type 2 diabetes. GLP-1R is widely expressed in several tissues, and therapies based on GLP-1 are of great clinical interest not only regarding its effects at the level of the beta cells, but also the biological actions exerted in other tissues. Among them, anti-inflammatory activity seems to be a common mechanism through which these therapies achieve beneficial effects.

The focus of this Special Issue is any aspect of pancreatic and extra-pancreatic anti-inflammatory effects of GLP-1. The implication not only for diabetes, but also for other diseases is of particular interest.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
