Message from the Guest Editors

Dear Colleagues,

The gut microbiota is composed by trillions of microorganisms that have coevolved with humans for a mutually beneficial coexistence. Thus, alterations in gut microbiota composition and functions have been implicated in the onset of many diseases. The advent of high-throughput next-generation sequencing platforms has accelerated the rate at which we obtain knowledge about the composition of the gut microbial communities. However, their functions and how they interact with the host is not fully known, and this is an interesting point since most bacteria are physically separated of the host by a mucus layer. In addition, host–microbiota interactions are bidirectional, although most studies have focused on the effect of microbiota on host metabolism. By contrast, host factors shaping the microbiota are not clear. The identification of molecular mechanisms by which the microbiota impacts systemically and distally on the host, and how the host could modulate gut microbiota, would enable us to better control many diseases, and to identify new ways to manipulate the microbiome, opening new opportunities for personalized medicine.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
