Multiple Actions of Melatonin on Improving Female and Male Reproductive Health

Message from the Guest Editor

The goal of this series of papers is to comprehensively summarize, either by means of original papers, mini-reviews or more extensive reviews, the role of melatonin in regulating the normal physiology and the pathophysiology of both the female and male reproductive systems. There is a large amount of new data that have accumulated in this important research field that have veterinary and clinical applications in species from fish to humans. It is the aim of submitted papers to encourage further studies in this field with the hope that this will advance the use of melatonin to ensure improved reproductive outcomes and a reduction in the loss of critical resources.

Message from the Editorial Board

The International Journal of Molecular Sciences (IJMS, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. IJMS publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in IJMS and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15.7 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2019).
