There are several reasons why so many researchers remain fascinated by neural crest cells more than a century after their first description. One reason is the central role these vertebrate-specific cells played during evolution. A second is the unique ability of these cells to migrate over very long distances during a relatively short time window. A third reason is the multipotency of these cells, which is so extensive that the neural crest is even considered a germ layer on its own, just like the ectoderm, mesoderm, and endoderm. Neural crest cells not only contribute a wide array of specialized cell types, but can also indirectly affect tissue morphogenesis by influencing the behavior and/or function of adjacent non-neural crest cells. A fourth reason is the apparent propensity of some neural crest cells to persist as tissue-resident stem cells in many adult tissues. A fifth reason is their involvement in a large number of human diseases, collectively referred to as neurocristopathies, an expanding research field that now benefits from decades of fundamental research on neural crest development.

The International Journal of Molecular Sciences (IJMS, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. IJMS publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in IJMS and consider publishing your next paper with us.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry & Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
