Message from the Guest Editor

Dear Colleagues,

The development of new drugs is needed to treat different types of diseases related to parasites, virus, bacteria, or fungi and to cure human diseases such as cancer or autoimmune/inflammatory pathologies. In this context, medicinal chemistry can lead to the identification of novel compounds that show pharmacological properties. These novel chemical entities can be chemically synthesized or isolated and purified from natural sources, or they can sometimes be used in combination with a synthetic drug and a nutraceutical.

In this Special Issue, we welcome studies that report on the synthesis/isolation/functionalization/characterization and biological activities of synthetic compounds or of organic compounds obtained from natural sources endowed with biological activity to serve as drug candidates for diseases that impair public health.

Dr. Roberta Ettari

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
