Message from the Guest Editors

This Special Issue on ALS aims to review the latest advance in ALS research that include: 1) the new results from the large-scale genome wide association studies (GWAS) and next-generation sequencing; 2) the development of new in vitro and in vivo experimental models tailored to approach the genetic heterogeneity of the disease; 3) the identification of biomarkers that allows to predict the disease progression and to stratify ALS patients for clinical trials; 4) the study of interaction between different cell types in the axis that goes from the central nervous system to the muscle including other components like the immune system; and 5) the examination of strategies that potentially lead to disease-modifying treatments.
Message from the Editorial Board

The International Journal of Molecular Sciences (IJMS, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. IJMS publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in IJMS and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15.7 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2019).
