Diagnostic, Prognostic and Predictive Biological Markers in Bladder Cancer – Illumination of a Vision

Message from the Guest Editors

Dear Colleagues,

Bladder cancer is the most common cancer of the urinary tract. Urine soluble markers should be able to ensure primary diagnosis, follow-up control and screening of high-risk populations. In addition, these markers are designated merely as supporting tools for monitoring bladder cancer patients instead of replacing cystoscopy. The vision of new scientific reports should be illuminated in this Special Issue with focus on “Diagnostic, Prognostic and Predictive Biological Markers in Bladder Cancer”.

We warmly welcome submissions, including original papers and reviews, on this widely-discussed topic.
Associate Prof. Dr. Thorsten Ecke
