submissions:

closed (31 December 2021)

Message from the Guest Editor

All SHG crystals of NLO materials should be non-centrosymmetric. The question of how to enforce the crystal structure noncentrosymmetric without engaging intrinsically chiral molecules still seems to be open, but sometimes the creation of weak chemical interaction, such as hydrogen bonds can be deciding about the symmetry of prepared crystals. On the other hand, the influence of hydrogen bonds on the NLO properties of investigated materials is not clear-cut.

Generally, one way is connected with the synthesis of a new inorganic compound, which features relatively low room for improvements of the strength of the NLO effects, but these compounds have very good optical and physical properties such as the growth of large single crystals and durability. On the other hand, the strategy that employs the synthesis of hybrid materials that comprise two parts, organic and inorganic, also gained high popularity.

In the special issue the completely new papers devoted to strategy to merge organic part that may feature high first hyperpolarizability (β) with an inorganic component which can act as a modifier of the nonlinear response, but also can impart better physicochemical properties.

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
