Message from the Guest Editor

Dear Colleagues,

Over the past two decades, the focus of nutrition has shifted from traditional epidemiological approaches of investigating the effects of diet on general population health towards a better understanding of the main processes through which dietary components regulate biological functions. The completion of the human genome project revealed significant individual and population differences in response to diets that now need to be seriously considered when new nutritional strategies are to be developed. The new era of nutrition (nutrigenomics) became of particular importance when applied to the increased global epidemics of predominantly diet related diseases. Another important aspect of modern nutrition is to develop personalized diets and this great concept has yet to be fully developed.

This Special Issue, "Nutrigenomics of Risk Factors for Disease", will focus on the nutrigenomic role of diet in development and prevention of chronic diseases.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
