Prevention, University Tor
Vergata, Rome, Italy

Deadline for manuscript
submissions:

closed (31 July 2021)

Message from the Guest Editors

For many years, chemotherapy with taxanes has represented the only option for PC progressing in spite of castrate levels of testosterone, a severe clinical condition termed as metastatic castration-resistant prostate cancer (mCRPC). The management of mCRPC has been deeply modified by the introduction of several novel treatments, such as second-generation antiandrogens, PARP (poly(ADP)-ribose polymerase) inhibitors and cellular immunotherapy. Furthermore, targeted radionuclide therapy with the bone-seeking agent radium-223 dichloride (Xofigo) proved useful for improving survival in mCRPC with bone metastases. More recently, prostate specific membrane antigen (PSMA) has emerged as an attractive biomarker both for positron emission tomography (PET) imaging and targeted radionuclide therapy, in the perspective of combining diagnosis and treatment in a unique approach (i.e. “theranostics”).

The aim of this Special Issue is to solicit original researches or review articles highlighting the potential usefulness of different molecular probes, in order to define customized therapeutic pathways in patients affected by PC.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
