### Message from the Guest Editor

Dear Colleagues,

Raman spectroscopy (RS) can be used to determine the chemical composition and the structure of various samples without the need for labeling and extensive sample preparation. This technique is particularly convenient for biological applications, since the Raman signal is not hidden by the contribution of water molecules. Due to the low Raman cross-section of most biomolecules, surface-enhanced Raman spectroscopy (SERS) has also been developed for molecular detection of specimens in minute concentrations, while tip-enhanced Raman spectroscopy (TERS) has emerged as a powerful tool for nanoscale chemical, structural and morphological imaging of biomaterials. In this issue, several recent scientific advances in RS, SERS and TERS, for the study of biosystems, are presented at the experimental and theoretical levels, and original biological and biomedical applications of these techniques are described.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
