Deadline for manuscript submissions: closed (30 November 2020)

Message from the Guest Editor

Dear colleagues,

The superfamily of transient teceptor potential (TRP) proteins is constituted by structurally and functionally diverse cation channels that, according to their amino acid sequence homology, are classified into seven subfamilies: TRPC (canonical), TRPV (vanilloid), TRPM (melastatin), TRPP (polycystin), TRPML (mucolipin), TRPA (ankyrin), and TRPN (NOMP-C), TRPs that are expressed in almost every cell type, and are expressed particularly strongly in electrical and intracellular Ca²⁺ signaling. The purpose of this Special Issue is to cover recent findings about the structure and biophysical and pharmacological properties and pathophysiological roles of TRP channels, ranging from the regulation of the epithelial barrier function to the control of neuronal excitability.

Prof. Karel Talavera *Guest Editor*

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
