Molecular Pathogenesis of Viral Hepatitis and Liver Cancer

Message from the Guest Editor

Viral hepatitis and related liver cancer remains a global health burden, despite the successful development of antiviral treatment and targeted molecular anti-cancer therapy. The unsolved issues include, but are not limited to, the following:

- Viral carcinogenesis
- Cure of chronic hepatitis B
- Mechanisms of hepatocellular carcinoma in patients with complete viral suppression and risk prediction
- Long-term effect of antiviral therapy
- Pathogenesis of combined hepatocellular carcinoma–cholangiocarcinoma
- Cancer immunotherapy

This Special Issue aims to cover the current understanding and cutting-edge research on these rapidly evolving fields in hepatology, and we invite contributions of reviews and/or original papers reporting recent efforts in this field.
Message from the Editorial Board

The International Journal of Molecular Sciences (IJMS, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. IJMS publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in IJMS and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15.7 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2019).
