

Special Issue

The Role of Mg Homeostasis in Disease

Message from the Guest Editor

Magnesium is the fourth most abundant mineral in the body, with the vast majority of it being stored in bone. Maintaining adequate magnesium levels is key to health. In this regard, hypomagnesemia has been related to diseases such as osteoporosis or cardiovascular diseases and has also been associated with mortality. At the molecular level, magnesium is capable of modulating membrane receptors such as the transient receptor potential melastatin-subfamily member 7 (TRPM7) or the calcium-sensing receptor (CaSR), regulating signaling pathways involved in many cellular functions such as cell differentiation, proliferation, inflammation, etc. The aim of this Special Issue is to compile the latest scientific advances on the role of magnesium homeostasis in disease, such as kidney disease, diabetes, osteoporosis, genetic diseases, cardiovascular disease, and cancer, among others. In addition, the role of magnesium in the control of cellular processes such as oxidative stress or inflammation will also be discussed.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
