New Insights into Periodontitis: From Biology to Treatment

Message from the Guest Editor

Periodontitis is the most prevalent chronic inflammatory human disease. If untreated, periodontitis results in periodontal tissue destruction and, eventually, loss of teeth. Moreover, it increases with age and is closely associated with systemic diseases, such as cardiovascular disease, diabetes, and Alzheimer's disease. This Special Issue of the *IJMS* focuses on new insights into periodontitis from biology to treatment including dysbiosis of the oral microbial community, host immune response, and epigenetic mechanism in the development and progression of periodontitis to find out new targets for periodontal treatment. We welcome both original research articles and review papers that deal with the following:

- Communication and dysbiosis of oral microbes;
- Host response including innate and adaptive immunity in periodontitis; Periodontal inflammatory response;
- Regeneration of periodontal tissue;
- Gene expression related to periodontitis;
- Epigenetic modification including DNA methylation, histone modification, and non-coding RNAs in periodontitis;
- Development of new targets for the control of periodontitis;
- Treatment of periodontitis.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
