Special Issue

Protein-Protein Interactions of Platelet Receptors

Message from the Guest Editor

Platelet receptor interactions play a major role in pathological conditions such as thrombosis and thrombo-inflammation. Targeting protein-protein interactions is a fundamental approach to developing antiplatelet therapies. Examples of existing drugs that inhibit platelet receptor-protein ligand binding include the glycoprotein Ilb/Illa inhibitors Abciximab, Eptifibatide, and Tirofiban, which block receptor binding to fibrinogen and von Willebrand factor. A variety of platelet receptors have been identified as promising antiplatelet targets that, when inhibited, do not induce increased risks of bleeding. Understanding the nature of these interactions is key to designing specific inhibitors.

The study of protein interactions involving platelet receptors has far-reaching implications, from fundamental biological processes to the development of life-saving medications. This Special Issue, entitled "Protein–Protein Interactions of Platelet Receptors", will provide an up-to-date description of new and exciting interactions of proteins with platelet receptors.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
