Special Issue

Centrosomes and Microtubule-Organizing Centers

Message from the Guest Editors

Microtubules in cells usually emerge from special seeds. The centrosome consists of centrioles surrounded by fibro-granular pericentriolar material to which the MTuRCs are attached. In addition to organizing the pericentriolar material, centrioles are required for the formation of cilia and flagella. It is not uncommon for cells to form additional MTOCs when NTuRCs accumulate on the Golgi apparatus, the nuclear envelope, or near the plasmalemma. Despite intensive research, details about the formation of MTOC remain unclear. Thus, out understanding of TuRC attachment to the pericentriolar material and other cell contents, accumulation of pericentriolar material around the centrioles are unclear. The assembly process of centrioles at the molecular level remains largely enigmatic. Disturbances in MTOC formation can lead to spindle dysfunction and chromosomal abnormalities in mitosis. This Special Issue of IJMS aims to provide our current understanding of MTOC and centrosome formation and functioning at the molecular level. Prof. Dr. Elena S. Nadezhdina

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
