Alzheimer's Disease: From Pathogenesis to Treatment

Message from the Guest Editor

Alzheimer's disease (AD) is a progressive neurodegenerative disorder characterized by the presence of insoluble amyloid plaques, hyperphosphorylation of tau with formation of intracellular neurofibrillary tangles. Furthermore, neuronal loss in different transmitter systems lead to neurochemical deficits that contribute to cognitive and behavioral symptoms. The field has gradually moved away from the simple assumption proposed by the amyloid hypothesis to new theories of pathogenesis, including neuroinflammation, changes in insulin resistance, calcium modulation, mitochondrial alterations and infections, between others. Currently approved treatments for AD are "symptomatic" agents that aim to improve cognitive and behavioral symptoms without altering the underlying course of the disease and recently, two monoclonal antibodies targeting amyloid plaques have been approved. With this Special Issue, we would like to focus on the mechanism of action (MoA) of pharmacological symptomatic and disease-modifying treatments for AD and describe novel non-pharmacological interventions used to manage both cognitive and behavioral symptoms.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
