Molecular Research of Cardiovascular Disease

Message from the Guest Editor

Cardiovascular disease remains the leading cause of death in men and women worldwide. Atherosclerosis, producing various degrees of vascular ischemia, is the most common type of cardiovascular disease. The heart's metabolism relies on adequate oxygenated blood flow to the myocardium to maintain its integrity and function. Various degrees of myocardial ischemia can negatively affect this state of myocardial homeostasis. Continued research efforts have led to the development of methods to lessen the negative effect of ischemia on the myocardium. This Special Issue is centered around the role of myocardial metabolism in cardiovascular disease.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
