Molecular Mechanisms of Immunotherapy in Cancer

Message from the Guest Editor

This Special Issue focuses on the molecular mechanisms underlying immunotherapy in cancer. Understanding the interactions between immune cells, tumor cells, and the surrounding microenvironment will provide insights into novel therapeutic strategies and biomarkers for predicting treatment response. We invite researchers to submit original research articles and reviews covering topics such as immune cell engineering, cytokine signaling, metabolic regulation in the tumor microenvironment, and innovative combination therapies.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.
