

## Special Issue

# Age-Related Vascular Physiology

### Message from the Guest Editor

Blood vessels play a crucial role in the proper function of the organs and the well-being of the organism. Age changes in the vasculature are associated with vascular diseases that lead to significant morbidity and mortality of old people, which are ever increasing in the population, and primary care is a priority for clinicians. One common factor to this health issue is an age-related decline in vascular structure and function that is presently not completely understood. Several studies are focused on understanding molecular aspects of age-impaired vascular systems. This Special Issue aims to collect the most recent information related to vascular changes associated with aging and the underlying molecular mechanisms to provide new insights and innovative strategies for the management of vascular disorders that affect older people.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
