Adipose Tissue Dynamics in Laminopathies

Message from the Guest Editor

Lamin A, the major splicing product of the LMNA gene, is the main constituent of the nuclear lamina, a filamentous network underneath the nuclear membrane. Lamin A, in association with its nuclear envelope partners, plays a pivotal role in the organization of the nuclear architecture and in the regulation of several nuclear processes. Mutations in nuclear lamina/nuclear envelope proteins cause rare genetic diseases collectively referred to as laminopathies. Although clinically different from the other, all laminopathies present with adipose tissue dysfunction of various severities. It is becoming increasingly evident that adipose tissue dysfunction contributes to the pathogenesis of laminopathies in multiple organs. To date, neither lipodystrophy nor lipoatrophy has been improved by any of the pharmacological approaches attempted in laminopathic patients. The aim of this Special Issue is to collect and summarize data, which can clarify the role of prelamin A in adipose tissue dynamics and pathogenetic pathways in order to provide relevant hints to refine current therapeutic strategies and suggest more efficient therapies.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
