

## Special Issue

# Micro-Nano Materials for Drug Delivery and Disease Treatment

### Message from the Guest Editor

Natural and synthetic micro/nanoscale materials for drug delivery and disease treatment have attracted great attention worldwide in the past few decades. Fundamental research has demonstrated that the diagnosis and therapy efficiencies of diseases could be improved as the concentration of drugs (e.g., chemotherapy drugs, diagnostic reagents) in lesions are usually significantly enhanced by these biomaterials. More and more novel micro-nano materials with unique properties have been developed by researchers for the diagnosis and therapy of cancers, diabetes, Alzheimer's and Parkinson's diseases and other diseases. However, up to now, only a very small portion of micro-nano materials have been successfully applied in clinical practices. For this reason, this Special Issue aims to highlight the most recent scientific advances in the research of micro/nanoscale materials-based drug delivery and disease (cancer, diabetes, etc.) treatment.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
