Molecular Mechanism of Diabetes and Its Complications

Message from the Guest Editor

Diabetes increases the risk of comorbidities, such as retinopathy, neuropathy, nephropathy, coronary artery disease, peripheral artery disease, and stroke. Various biochemical pathways activated under hyperglycemic conditions can contribute to the complications. It is important to reveal the mechanisms of early characteristic features of the comorbidities in hyperglycemia, which is considered to have a principal role in accelerating complications. For this Special Issue, we invite original research, review articles, rare case reports, and literature reviews on recent progress in molecular mechanisms of the relationship of diabetes with the complications in humans and animals.

Guest Editor

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
