Molecular Mechanism and Treatment of Diabetes Mellitus and Its Complications

Message from the Guest Editor

Much research has been carried out to understand diabetes and its associated late complications. Nevertheless, day by day, we gain more information on how diabetes develops, progresses and, finally, in some patients earlier than in others, leads to increased multimorbidity and mortality. I am pleased to announce that we now have the chance to expand our knowledge on how diabetes develops in ways far removed from the proposed lifestyle-only hypothesis; thus, submissions including genetic analyses and cohort screenings are welcome for this Special Issue, including those regarding all types of diabetes including MODY. Those asking what makes type 1 diabetes a LADA and why it appears late are also welcome. Other relevant topics for this Special Issue include molecular mechanisms of new treatment options regarding type 1 or type 2 diabetes connecting the pancreas, liver, gut and kidney. In addition, we are interested in late complications and their associated mechanisms, paying special attention to micro- and macrovascular combinations like cardio-renal syndrome, polyneuropathy and cardiac autonomic neuropathy.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
