

Special Issue

Molecular Diagnostic and Therapeutic Advances of Type 2 Diabetes and Its Complications

Message from the Guest Editors

This Special Issue focuses on advances in the underlying molecular mechanisms in the development and progression of type 2 diabetes from prediabetes and their interplay with obesity. It also welcomes articles on the molecular mechanisms which underpin the development and evolution of both macrovascular complications, including cardiovascular disease, dyslipidemia, and non-alcoholic fatty liver disease, as well as the microvascular complications of retinopathy, nephropathy, and neuropathy. Original and review articles addressing the molecular basis of novel biomarkers as well as therapeutic options in the management of type 2 diabetes and its complications are also considered in this Special Issue.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
