

## Special Issue

# Genes Function and Mechanism Identification in Plant Stress Resistance

### Message from the Guest Editor

With global warming and the aggravation of extreme weather events, factors such as drought, high temperature, and low temperature have become common abiotic stresses in the plant developments, especially the crop-producing areas such as cotton. It is the need of the hour to create plant germplasms resistant to such kinds of abiotic stress by exploiting, cloning, and verifying novel genes.

This Special Issue, “Genes Function and Mechanism Identification in Plant Stress Resistance”, will cover a selection of recent research topics and current review articles in the field of exploiting, cloning, and verifying novel genes related to plant stress resistance, such as drought, high temperature, low temperature, and so on. Bioinformatics papers, up-to-date review articles, and commentaries are also welcome.

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore  
- Q1 (Organic Chemistry)
