New Biomarkers in Pancreatic Diseases

Message from the Guest Editors

The biomarkers in pancreatic diseases represent significant advancements in the early detection, diagnosis, and management of pancreatic diseases, including the early detection of pancreatic cancer or prognosis in acute pancreatitis. Elevated levels of miR-21 are associated with various pancreatic conditions, making it useful for early detection and monitoring disease progression. Additionally, EV analysis from body fluids offers a noninvasive approach to detecting and monitoring pancreatic diseases, providing valuable insights into disease state and progression. This approach has the potential for more accurate diagnosis and targeted treatment strategies, improving patient outcomes and quality of care.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
