Recent Advances in Male Reproductive Physiology, Pathophysiology, and Contraception

Message from the Guest Editor

The field of male reproduction has been steadily growing. This responds to the needs of more translational research that will advance our knowledge of the mechanisms underlying sperm production, maturation, and function. Understanding these processes is essential to assist in the development of therapeutic strategies that can specifically target male infertility, for which in most cases the etiology is unknown. On the other hand, the rapidly growing world population and high rate of unintended pregnancies make contraception a need and a priority for any public health program. While several female contraceptives are currently available, male contraception is still a highly desired unmet goal. Given your important contributions to the field of male reproduction, I am inviting you to submit an article with your latest discoveries in this fascinating area of research. This Special Issue aims to publish original articles, reviews, etc. on male reproductive physiology, pathophysiology, and contraception bringing new perspectives.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
