

## Special Issue

# New Advance on Molecular Targets for the Treatment of Pain

### Message from the Guest Editor

Although the incidence rate of chronic pain is very high, because various chronic pain conditions have different causes, and its pathophysiological mechanism is not completely clear, its treatment effect is limited and will produce different degrees of side effects. Therefore, there is an urgent need for new and effective therapies to control and prevent different types of chronic pain. In this special collection, we will explore novel molecular targets for the treatment of pain that improve analgesic efficacy. Potential areas of interest include but are not limited to research on signal transduction and real modulators of pain signaling. In this regard, we provide recent advances and future directions in the pathophysiology and treatment of chronic pain. However, manuscripts describing new methods for the study of pain or opinion articles exposing a particular point of view about any aspect of chronic pain are also welcome.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
