

## Special Issue

# Emerging Topics in Metal Complexes: Pharmacological Activity, 2nd Edition

### Message from the Guest Editors

Due to their pharmacological potential, metal complexes and compounds have been arousing interest in many research centers worldwide. The structure and properties of many metal coordination compounds make them therapeutically effective. They are used not only in the treatment of some modern-age diseases but also in clinical diagnostics. Currently, metal complexes and compounds (such as polyoxometalates) are prominent players in medicine and medicinal chemistry. We invite authors to submit original research papers or review articles on the pharmacological activity of metal coordination compounds with a focus on strategies to improve their pharmacological features and on links between metal-containing complexes and potential therapies of human pathologies with mechanistic analysis.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
