Design, Discovery and Development of Modulators Targeting Protein-Protein Interactions

Message from the Guest Editor

The human proteome comprises approximately 20,000 proteins, and protein–protein interactions (PPIs) play pivotal roles in biological processes. Their dysregulation often results in the onset and progression of several diseases. Therefore, PPIs represent promising drug discovery targets. Historically, PPIs were considered to be “undruggable” with their large and flat binding surfaces being smooth and lacking well-defined binding pockets. Targeting these is a challenging task when attempting to convert drug-like **small molecules** to therapeutics due to the fact that PPI interfaces exhibit different biochemical and biophysical properties relative to the small molecule compound binding pockets.

Natural products, derivatives thereof, **peptides**, and **peptidomimetics** represent other sources for the modulation of PPIs. We invite authors to submit original research and review articles regarding the molecular aspects, including, but not limited to, the following topics:

- Bcl-2 family PPIs (**cancer**)
- p53–MDM2 (**cancer**)
- RKIP(Raf kinase inhibitory protein)—C-Raf(Raf-1 kinase) (**cancer** and **Alzheimer’s disease**)
- Keap1–Nrf2 (**cancer**)

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
