

## Special Issue

# Novel Players in Chemioresistance as New Targets for Cancer Treatment

### Message from the Guest Editors

Cancer is one of the most common causes of death among adults. In the past decades cancer management was restricted to surgery, radiation therapy and chemotherapy either as single treatments or as combination therapy. However, the development of multidrug resistance continues to pose a significant challenge in cancer therapies. Therefore, a better understanding of the molecular basis underlying the mechanisms of drug resistance is necessary to produce improved guidance to future cancer treatment. This special issue aims at collect new discovery in the mechanisms of drug resistance, focusing on the therapeutic potential of targeting new pathways involved in chemoresistance.

The article may be either a full paper or a communication based on your own research in this area, or may be a focused review article on some aspect of the subject.

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore  
- Q1 (Organic Chemistry)
