# Gastrointestinal Cancer: From Pathophysiology to Novel Therapeutic Approaches

### Message from the Guest Editor

Gastrointestinal cancers include a broad range of malignant tumors affecting organs such as the esophagus, stomach, colon, liver, and pancreas. These cancers pose a significant global health burden, resulting in high morbidity and mortality. The pathophysiology of gastrointestinal cancers is multifaceted and involves complex molecular alterations. A comprehensive understanding of these processes paves the way for significant advances in therapeutic approaches. This Special Issue “Gastrointestinal Cancer From Pathophysiology to Novel Therapeutic Approaches” of the International Journal of Molecular Sciences focuses on the study of molecular mechanisms and new therapeutic strategies for gastrointestinal cancers.

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.
