Molecular Pathogenesis of Oral Potentially Malignant Disorders Transformation

Message from the Guest Editor

Oral potentially malignant disorders are mucosal diseases with different aetiologies. The risk of malignant transformation varies among these lesions and has been correlated with oral epithelial dysplasia. However, epithelial dysplasia lesions can last long without undergoing malignant transformation and even regress spontaneously. The underlying molecular changes related to oral cancer transformation are poorly understood. In this Special Issue, we will present works that clarify the molecular pathogenesis associated with potentially malignant oral disorders' transformation into oral cancer. Articles addressing predictive molecular markers or future perspectives of molecular tools for oral cancer prevention are also encouraged.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
