Thioredoxin Reductase: Signaling Pathways and Pharmacological Targets

Message from the Guest Editor

Human thioredoxin reductase (TrxR) is a selenoprotein that utilizes highly reactive selenocysteine (Sec) residues in its active site. The pharmacological regulation of TrxR is typically presented in light of interactions with Sec residues and a few other mechanisms of action. The small-molecule-mediated regulation of TrxR signaling pathways has been investigated for its clinical significance and translational medicine in a variety of diseases. For example, the remarkable role of small molecules targeting the TrxR signaling pathway in anticancer and anti-infection, rheumatoid arthritis, and ischemia therapies has been explored in detail. Nonetheless, the rationale of the TrxR signaling pathway in therapeutic strategies for human diseases, the underlying molecular basis of small molecules targeting TrxR for therapeutic purposes, the downstream mechanisms of effect that may mediate therapeutic efficacy, and the diversity of therapeutic molecule structures and druggability are all topics that we will focus on in this Special Issue. **Keywords:**

- thioredoxin
- thioredoxin reductase
- redox homeostasis
- redox regulation

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
