Cell Signaling and Immune Targets in Cancer

Message from the Guest Editors

Cancer is a major public health problem worldwide. With over 100 different types—and great phenotypic and genotypic heterogeneity within a single cancer type—it is very difficult to provide generalized and effective therapy. Thus, research has increasingly focused on targeted therapy based on small-molecule, monoclonal antibodies, as well as developing technologies capable of modulating the immune system, such as CAR-T or CAR-NK immunotherapies. This Special Issue aims to collect the latest findings on molecular pathways and immunology targets in cancer. Original articles reporting biomolecular studies—including pre-clinical studies—reviews, and commentaries are welcome. Pure clinical studies will not be considered for this Special Issue.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
