Tissue Culture-Free Plant Genome Editing and Transgenesis

Message from the Guest Editor

Genome editing and transgenesis have become powerful tools for plant functional genetics research and genetic improvement of agricultural crops. However, the application of gene editing and transgenesis has been slow due to inefficient methods of reagent delivery and the reliance on tissue culture to create gene-edited or transgenic plants. There is a need for novel, alternative approaches to create genetically modified plants more efficiently. This Special Issue aims to cover advances in tissue culture-free plant genome editing and transgenesis technologies and their applications in the functional characterization of plant genes and crop improvement. Original research papers and reviews are welcome.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
