Protein-Protein Interactions as Druggable Targets: Recent Advances

Message from the Guest Editors

Protein-protein interactions (PPIs) as druggable targets is fairly new. PPIs are more abundant in human cells than single proteins and play numerous crucial roles in cellular processes, including diseases. Therefore, molecules that prevent the formation of these protein complexes could represent a good strategy to treat different diseases. Due to the structural diversity of protein interfaces, one of the main goals in drug discovery is to identify these interfaces and to explore their properties to make promising drugs. Finding a small molecule able to inhibit the interaction in a protein-protein complex remains a hard task. Natural compounds could be an interesting starting point for this purpose. Because of its inherent challenges, new technologies and strategies must be adopted to overcome the many difficulties in the research of finding safe and efficacious drugs for these targets. In this Special Issue, we encourage authors to submit manuscripts in the form of research papers, reviews, or communications that improve the knowledge in this field, contributing to efficient advances in drug discovery research.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
