# Epigenetic Regulation in Human Brain 2.0

### Message from the Guest Editor

The human brain is an organ of enormous complexity, composed of a multitude of cell types, including various populations of neuronal and glial cells. Epigenetics has been recognized for a long time as a group of molecular mechanisms that are essential in establishing and maintaining this complexity. Understanding the epigenetics of brain cell types is also necessary to uncover the mechanisms underlying nervous system disorders, which often display cell type-specific aetiology. In this Special Issue, we will highlight modern developments in the field of neuroepigenetics of human brain cell populations, in its relationship to brain development, health, and disease.

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.
