

## Special Issue

# Fascial Anatomy and Histology: Advances in Molecular Biology

### Message from the Guest Editor

The structural and functional importance of the fascial system has largely been overlooked by the therapeutic community in the past. Recent research has demonstrated that fascia is highly innervated and probably our most sensitive organ for proprioception, particularly the deep layers. Exteroceptive receptors appear to reside more within the superficial fascia. In addition, it is evident that there are many different types of fasciae, and each one serves multiple functional roles. Finally, the visceral fasciae support the organs and interact with the autonomic nervous system. With this Special Issue, we aim to gain a better understanding of the various features of each fascia, considering their involvement in various pathologies, such as myofascial pain, lipoedema, and fibromyalgia. Also, papers focused on the interactions between fasciae and the metabolic and immunological systems are welcome.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
