

## Special Issue

# From Pathogenesis to Treatment—New Perspectives in Rheumatology 2.0

### Message from the Guest Editors

Osteoarthritis is by far the most prevalent rheumatic condition, yet no pathogenic treatment is currently available. In this respect, studies related to the efficacy of potential therapeutic agents that target cartilage degradation, bone remodeling, and synovial inflammation have reported conflicting results. There is a currently unmet need for novel therapeutic options in osteoarthritis beyond symptomatic treatment. In the present Special Issue, we aim to collect recent knowledge of the intricate pathogenic mechanisms of rheumatic conditions and their relationship with therapeutic management (novel treatment options, identification of new therapeutic targets, response to remissive treatment). Original research articles as well as reviews are welcome.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
