The Mechanism of Action of Food Components in Disease Prevention 2020

Message from the Guest Editor

Chronic diseases continue to increase despite increased nutrition awareness. A diet enriched in fruits, vegetables is known to reduce the incidences of chronic diseases. Diet is a major source for several essential molecules in conjunction with antioxidant enzymes, providing protection from deleterious reactive oxygen species (ROS). However, a detailed understanding on the mechanism of action of nutraceuticals leading to disease prevention is needed. Inflammation is recognized as the initiation point for several forms of cancer and chronic diseases. Diet- and lifestyle-related risk factors are risk factors for cancer. The activation of major inflammatory pathways involving Nf- κ B, STAT3, etc., is associated with most cancers. In addition to the modulation of inflammation-related cytokine signaling and gene expression, nutraceuticals act through epigenetic mechanisms. Thus, dietary antioxidants are compelling candidates for use as nutraceuticals in order to enhance the function of the antioxidant defense system during normal living conditions, thus preventing inflammation and decreasing the chances of developing chronic diseases.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
