Molecular Mechanism in the Pathogenesis of Alzheimer's Disease and Related Neurodegenerative Diseases

Message from the Guest Editor

Alzheimer's disease (AD) and related neurodegenerative disorders are complex conditions with intricate molecular underpinnings. AD often shares pathological features with other neurodegenerative diseases, including Parkinson's disease, Huntington's disease, and amyotrophic lateral sclerosis. Common mechanisms include protein misfolding, aggregation, and accumulation, leading to the formation of characteristic pathological structures, such as amyloid plaques and neurofibrillary tangles. Understanding these intricate molecular mechanisms holds promise for the development of targeted therapeutic interventions, such as amyloid- β aggregation inhibitors, tau-directed therapies, anti-inflammatory agents, and modulators of proteostasis. Integrative research efforts are needed to unravel the complex interplay between these mechanisms and to develop effective strategies for the prevention and treatment of Alzheimer's Disease and related neurodegenerative disorders.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
