Special Issue

Mechanism of Hepatitis B Virus Infection and Antiviral Development

Message from the Guest Editors

Hepatitis B virus (HBV) is a leading cause of liver diseases. HBV is the only virus of the Hepadnaviridae family that infects human hepatocytes. It is an enveloped virus with a partial double-stranded circular DNA genome at 3.2 kbp, which is extremely small compared to other DNA viruses. The unique arrangement of the open reading frame, the replication strategy of reverse transcription of the RNA intermediate to generate the DNA genome, and the production of a large number of non-infectious HBs particles in addition to the infectious particles are also characteristic of this virus.

Current therapies include nucleos(t)ide analogs (NUCs), which act directly on viral replication, and immunomodulators such as interferon therapy. NUC therapy suppresses viral replication and improves liver histology. However, long-term NUC administration rarely results in functional cure (HBs seroclearance) of chronic hepatitis, and virologic relapse almost often occurs after treatment is discontinued.

This Special Issue is seeking articles that provide new insights into the molecular aspects of regulatory mechanisms of HBV lifecycle and drug discovery research against HBV.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
