Tumor Immune Microenvironment and Immunotherapy: Novel Insights and Future Perspectives in HCC

Message from the Guest Editor

Hepatocellular carcinoma (HCC), the most common histological subtype of liver cancer. Recently, numerous immunotherapeutic strategies have been elaborated in order to improve the therapeutic efficacy in many cancers, including treatments using immune checkpoint inhibitors (ICI) and monoclonal antibodies, cytokines or cytotoxic cells, gene transferred vaccines, and many others, with the aim to enhance the host capacity to fight against the tumor or to increase the sensitivity of tumor cells to the treatment.

This Special Issue focuses on the latest research trying to elucidate the complex interaction between the host immune microenvironment and hepatocellular cancer development and progression, with further identification of prognostic immune markers and biomarkers that predict treatment response. Moreover, this fundamental insight of the dynamic process of oncogenesis will lead to the development of new treatments targeted on blocking the signals of immunosuppression induced by tumor cells or on enhancing the host immune response by modulating the tumor immune micro-environment.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
