Implant and Graft Interactions with Hard and Soft Tissues

Message from the Guest Editors

The interaction between implanted materials and the bone/soft tissue complex is the new frontier of implant dentistry. This observation arises from the increased numbers of critical patients in whom the traditional protocols and the traditional materials might result in partial success, if not failure. Traditional dental implant approaches and materials have been demonstrated to have an impressive success rate in the healthy patient population. However, the extension of life of the global population and the consequent increased requests for these procedures, even in older and generally impacted patients, expose the clinician to failures.

A complete knowledge of the biomolecular exchanges and biophysics behind implant insertion or bone regeneration procedures could help industries to develop more advanced surgical tools and materials. From a practical standpoint, this might support clinicians in procedure improvement, making every surgical and prosthetic step more predictable, even in critical cases.

The aim of this Special Issue is to investigate the biological background of implant and graft materials interactions with bone through molecular science.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
